Professional Traditional UKC management

If your port hasn't made the step to DUKC® and you are unsure of the safety of your traditional UKC rule, or maybe you simply want to efficiently and professionally manage your static UKC calculations, then KeelCheck provides the best support you can get.

HANDY CALCULATIONS

KeelCheck comes complete with handy online calculators for squat, heel and wave response using standard formulations published by PIANC.

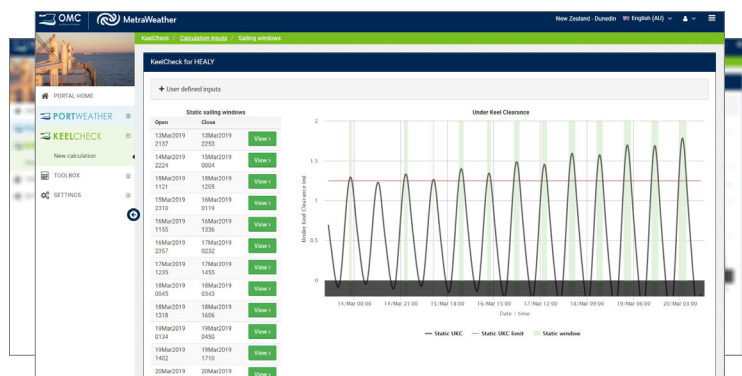

If conditions are marginal use the handy calculators to estimate critical "dynamic" UKC factors and check the safety of your traditional UKC rule.

PROFESSIONAL UKC TOOL

Designed for convenient access from anywhere on the web. Quickly and easily choose sailing windows using your port's traditional UKC rule.

Print and share a professional report to include in your Passage Plan and aid in the Master - Pilot exchange.

Don't Guess, Check!

At many ports, traditional UKC rules are just that - traditions. Hard to change, with the origins long since forgotten. Simple to calculate, but will their use be justifiable if the unthinkable should occur?

EXPERT SUPPORT

Provided by under-keel clearance management experts, OMC International, KeelCheck allows ports operating a traditional UKC rule to more professionally assess their grounding risk.

PEACE OF MIND

Address concerns using online KeelCheck calculators and record your estimates in professional Master-Pilot information exchange UKC reports.

PROFESSIONAL SOLUTION

They may be simple, but even traditional UKC calculations shouldn't be stored on scraps of paper. KeelCheck helps port and pilotage teams share results and ensure they are retained for audit purposes.
