

Environmental, Occupational Health & Safety Policy

It is **OMC International's** goal to manage our environmental impact and create a safe and healthy work place for employees, customers and the public.

We intend to fulfill these responsibilities, as far as is practical, through the application of our Quality Management Systems.

This will guide and inform our efforts to meet the following EOHS objectives:

- Appoint a responsible representative of management to review, communicate, implement and maintain responsibilities for Environmental Management and OHS;
- Encourage staff consultation, cooperation and participation in all Environmental and Occupational Health and Safety related matters;
- Provide sufficient training and information to employees and customers to allow the use of products, services and equipment safely and responsibly;
- Provide employees and customers with leadership and supervision in relevant Environmental and OHS management issues;
- Identify and control safety hazards and related risks;
- Upgrade machinery and work processes to safer and more efficient standards;
- Minimise our consumption of materials and energy;
- Provide and maintain procedures and work practices for housekeeping, operations and maintenance consistent with good OHS and Environmental practice;
- Dispose of wastes responsibly;
- Provide sufficient resources to implement, audit and maintain our Environmental and OHS controls and systems;
- Provide rehabilitation for injured staff;
- Continually review our legal compliance and improve the effectiveness of our Environmental and OHS controls and systems.

To ensure the effectiveness of this Policy and the entire Management Systems, staff and interested parties are encouraged to report all health and safety hazards and risks to management.

Peter O'Brien
